

Furthermore, upgrading hydrological monitoring networks and data management systems is essential for real-time water resource assessment and adaptive management. Improved data collection will enhance the accuracy of modeling and decision-making processes.

Acknowledgment

My special thanks go to my supervisors Prof. Basil T. Iro Ong'or and Dr. Edwin Kimutai Kanda for their technical support and guidance.

Conflict of Interest

The authors affirm that this research was conducted without any commercial or financial relationship that could be construed as a potential conflict of interest.
